Digital Nest Solutions
Desire to work....

PV DESIGN SERVICES

DIGITAL NEST SOLUTIONS is the sole foremost PV Design provider in India.
Our highly – skilled Designers work across all types of Solar PV installation Design
requirements to streamline businesses.

AGENDA

4	Residential PV Design
5	Commercial PV Design
6	Utility Scale PV Design
7	Preliminary PV Design

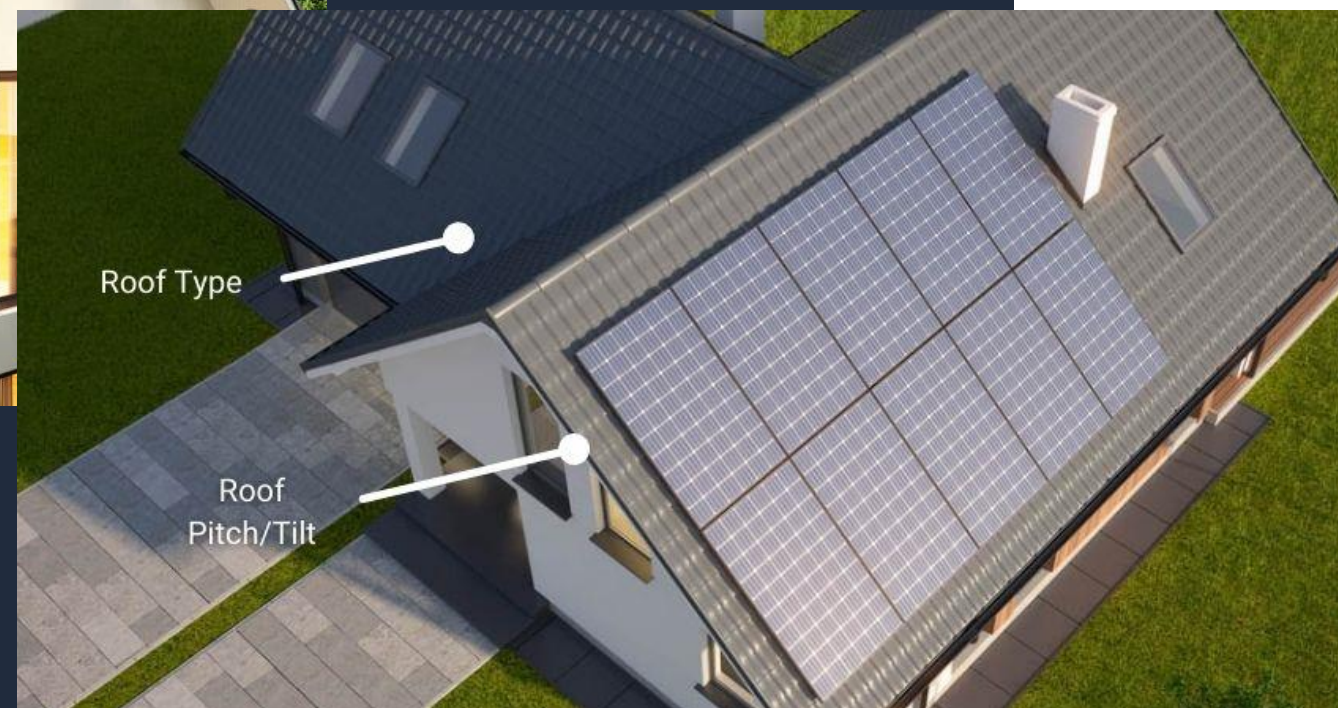

8	PV Syst Simulation
9	Solar Aurora
10	HelioScope
11	Open Solar
12	Contact information

RESIDENTIAL PV DESIGN

We have extensive experience in designing of residential solar system. We provide variety of services in this sector ranging from sales to interconnection. Our team has in depth knowledge of AHJ and Utility requirements and are acquainted with various codes and compliances.

COMMERCIAL PV DESIGN

Our Engineering Team is experienced in designing systems for this sector ranging from 20kW to several hundred kW. To ensure compliance with the codes, we provide detailed commercial design assets. As we have experience paired inverter/module, roof/racking, as well as specific incentive schemes to match the system size, we can assist you in choosing the right equipment for Balance of System based on the site specifics, including wind/snow, and general climate characteristics.

UTILITY SCALE PV DESIGN

The Engineering Services team has a wealth of experience and expertise in dealing with a variety of complex design considerations and variables. A variety of services is available to assist you, from selecting the site and equipment to designing the facility.

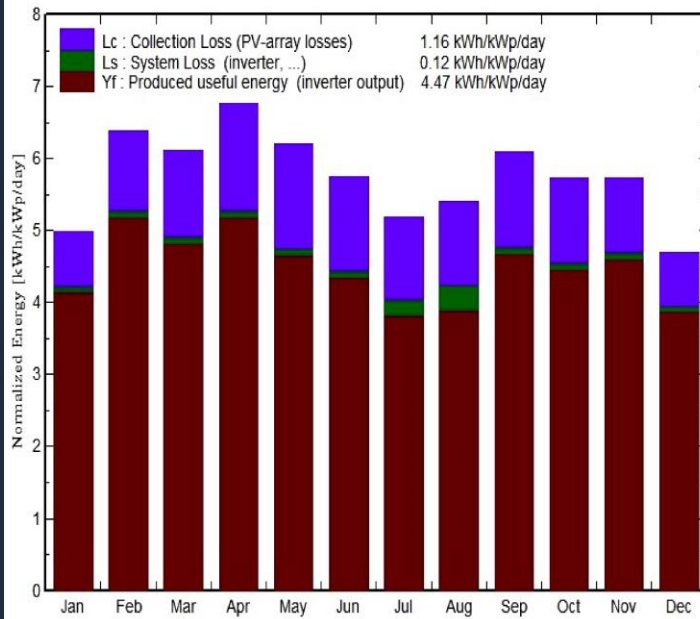

PRELIMINARY DESIGN

Preliminary design provides to have a look on the roof design to end user along with pricing, which helps in the conversion of query to an order

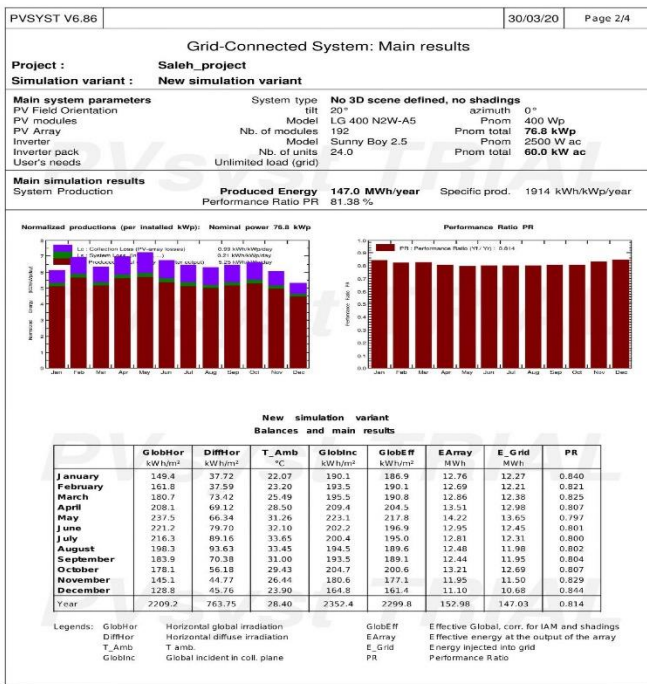

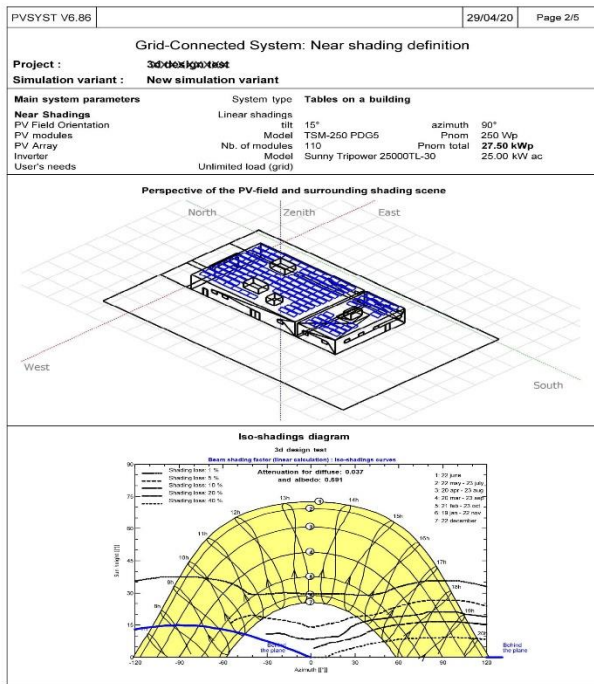

Normalized productions (per installed kWp): Nominal power 1002 kWp

(a)

SOLAR AURORA

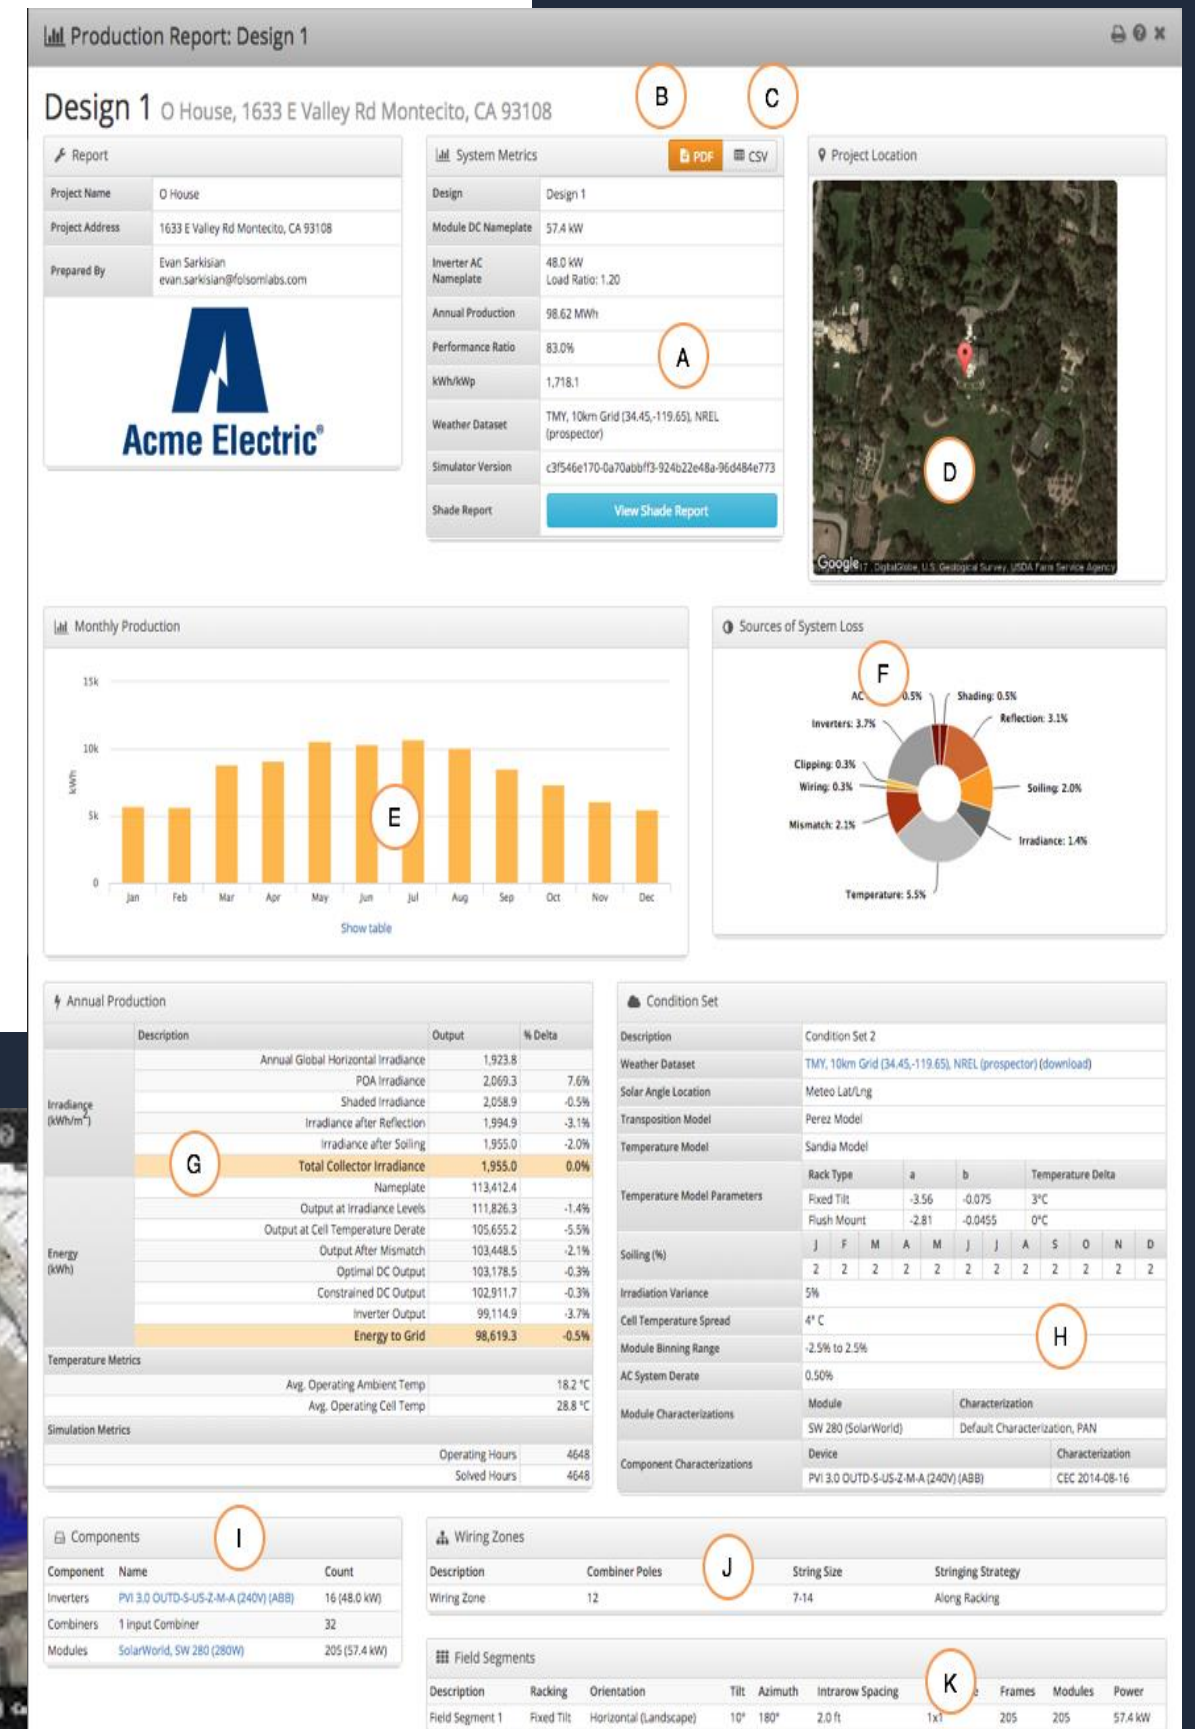

Solar Aurora is the most used tool for designing a solar power system. Save time and money in the quoting process by creating highly accurate solar designs without visiting the site. Our Team expert can create a design in minimal amount of time.

HELIOSCOPE

HelioScope is the most utilizing tool to design for commercial and utility scale solar projects Which produces high accuracy designs and simulations for respective area by considering atmospheric changes.

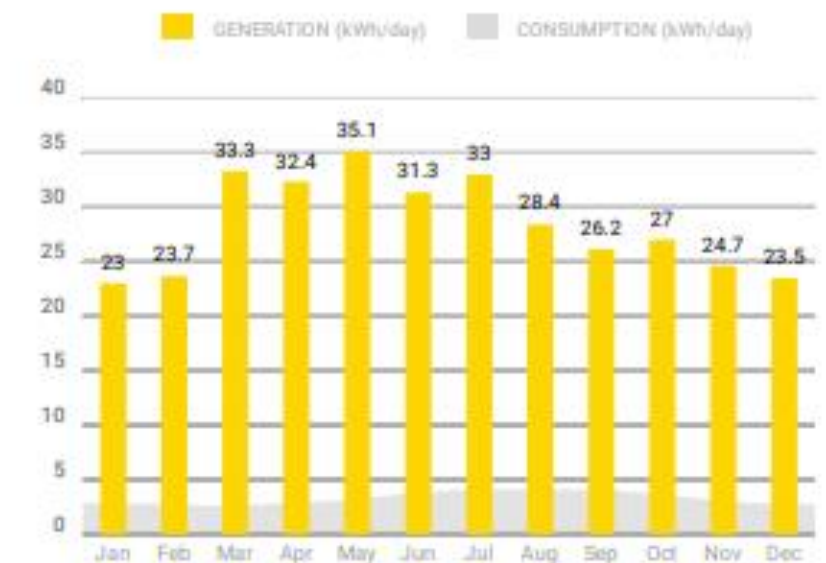

OPEN SOLAR

OpenSolar provides class-leading solar design accuracy, customer proposals and end-to-end tools to manage and grow your solar business, free.

System Performance

867%
Energy From Solar

System Performance Assumptions: System Total losses: 13.1%, Inverter losses: 3.0%, Optimizer losses: 0%, Shading losses: 0%, Performance Adjustment: 0%, Output Calculator: System Advisor Model 2020.02.29.r2; Panel Orientations: 18 panels with Azimuth 179 and Slope 20.

The solar system(s) quoted in this proposal are not intended to be portable.

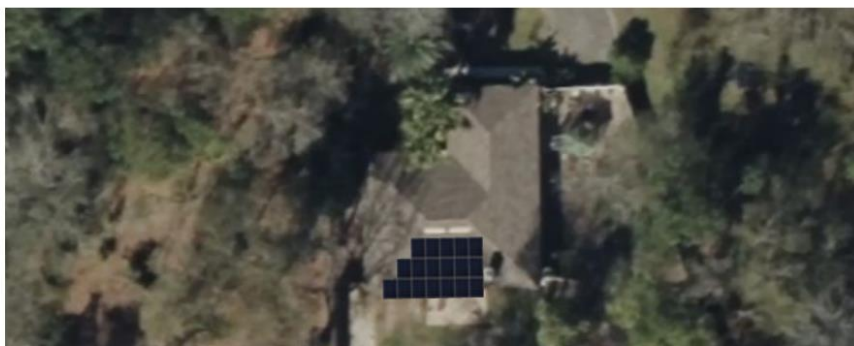

Recommended System Option

867%
Consumption Offset

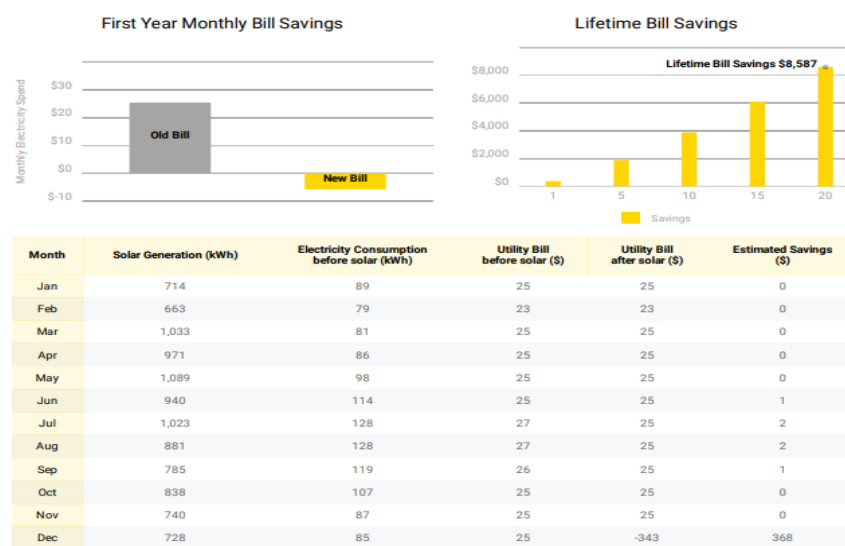

₹8,587
Lifetime Electricity Bill Savings

₹20,520
Net Cost of this solar system

₹11,933
Clean Energy Premium over system lifetime

Electricity Bill Savings

Environmental Benefits

Solar has no emissions. It just silently generates pure, clean energy.

Each Year
867%
Of CO₂, SO₂, & NO_x

5 tons
Avoided CO₂ per year

Over System Lifetime
86,515
Car miles avoided

896
Trees planted

100
Long haul flights avoided
