

A. VIDEO ANNOTATION

Responsibility for adding labels and tags to video footage. Unlike image annotation, video annotation involves annotating objects on a frame-by-frame basis to make them recognizable for machine learning models

POLYLINE ANNOTATION

Polyline annotation is reasonable in path location for independent vehicles characterizing bike, bearings, disparity and inverse course activity to see the environment for

secure and trouble-free driving of such vehicles supported with fruitful AI-models

Provides

1. Detect Lanes for Self-driving Vehicles
2. Accurate Lane detection with polylines
3. Precise Lane detection with analytics

B. KEYPOINT ANNOTATION

Keypoint annotation is a more detailed protocol for image annotation used to detect small objects and shape changes by marking keypoint locations. Keypoint annotation is used to mark a single pixel in an image to represent the shape of an object. The purpose of image annotation is to assign relevant, task-specific labels to images so that
