

Website corrections points – V2

1. Need to classify under Lidar Annotation as below

3. Lidar Annotation

a. 3D Cuboids Annotation

b. 3D Semantic Annotation (add the below description)

a computer vision problem that requires segmenting a 3D point cloud or 3D mesh into semantically significant areas.

2. Text annotation should come before examples of AI

Examples Of AI

INTENT AND SENTIMENT ANALYSIS

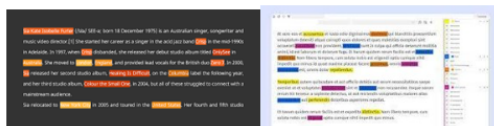

Aim examination could be a step ahead of sentiment investigation. Whereas the last mentioned may be a common content classification instrument that investigations an approaching message and tells whether the basic assumption is positive, negative, or unbiased, expectation investigation tells you all almost the user's purposeful behind the message.

Text annotation should go up
Examples of AI should be last

TEXT ANNOTATION

Content comment makes a difference machine learning models get it content information. Common workflows that utilize content explanation incorporate estimation and aim investigation, part-of-speech labeling, substance acknowledgment and classification. Amid the content comment prepare, the information is parsed into the specified categories counting expressions, sentences, and watchwords, based on the rules of the venture. The explained datasets train machines to communicate proficiently within the normal dialect of people.

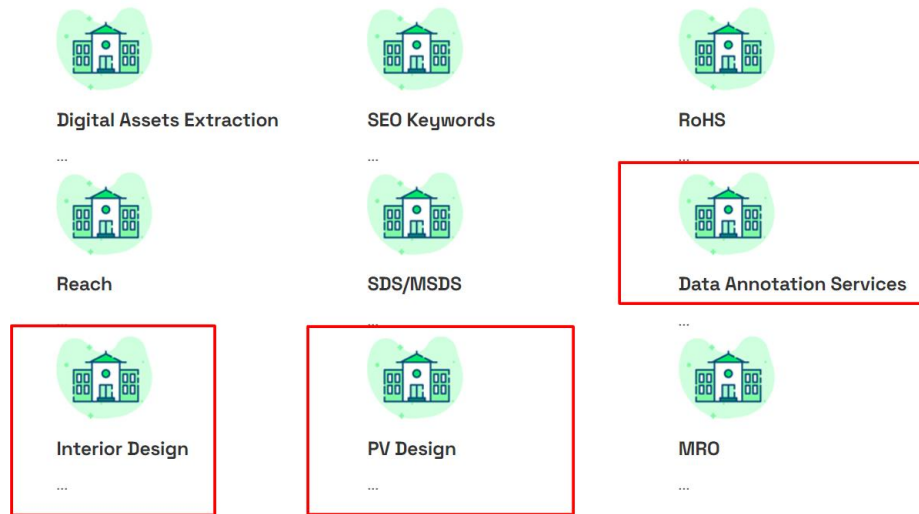

3. When we select Lidar annotation and Text annotation it should take us to respective content
(It is taking us to image and video annotation directly to the content. same needs to be done for Lidar and Text annotation)
4. Related Theme should come to the interface after selecting the topic
(Below image is coming for every topic we select)

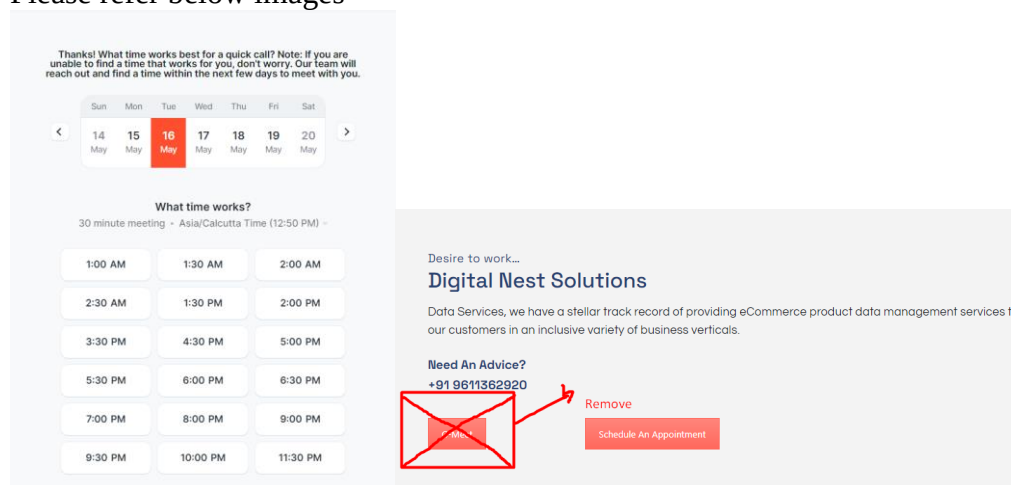

Introduction

5. Data annotation, PV design, Interior design are showing under MRO
They should not come under MRO

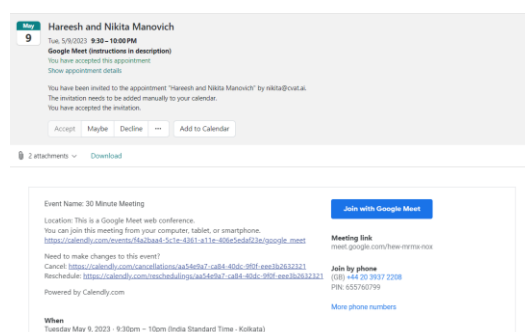

URL : <https://digitalnestsolutions.com/index.php/services/mro/>
